EDUCATION

New York University, New York, NY

Expected May 2027

Master of Science in Data Science

Smith College, Northampton, MA

June 2025

Bachelor of Science in Computer Science and Statistical Data Science; GPA: 3.99

Relevant Coursework: Database Systems, Probability and Statistics, Interview Data Science

PROFESSIONAL EXPERIENCE

Institute of Fine Arts, NYU, New York, NY

September 2025 – Present

IT Support Assistant

- Implemented Workspace ONE migration to enhance IT control and security, enabling centralized software deployment, privileged access management, remote update distribution, and automated admin password cycling.
- Provided hands-on hardware and software support for faculty, staff, and students, assisting in classrooms, offices, and event spaces.
- Streamlined repetitive IT support workflows by standardizing account setups and automating admin password cycling, reducing manual troubleshooting.

Computer Science Department, Smith College, Northampton, MA

June 2023 – September 2025

Machine Learning and Networks Research Assistant

- Developed and optimized ML models (OCSVM, XGBoost, Isolation Forest) to automate the detection of abnormal patterns in DNS network activity.
- Designed ELT pipeline from scratch, including AWS bucket data extraction, JSON parsing, feature extraction, data sampling, cleaning, and preprocessing as well as multi-threaded processing for efficiency.
- Implemented feature importance, metric, statistical, and case studies analysis to interpret model decisions and uncover new censorship signatures.
- Co-authored and successfully published a research paper at FOCCI, showcasing our findings.

Elliot Investment Management L.P., New York, NY

June 2024 – August 2024

Application Developer Intern (Hybrid)

- Designed and implemented a scalable and reliable centralized data source to streamline schema expansion for firm-wide entities, reducing development time across multiple systems.
- Built RESTful API calls to enable dynamic data retrieval and integrations with downstream applications, improving accessibility and automation.
- Developed a tagging system allowing users to automate the extension of entity schemas dynamically, with support for value types and historical tracking of tag values over time.
- Designed a read-optimized view to facilitate efficient downstream lookups, ensuring historical record-keeping and seamless integration with existing systems.
- Built a CI/CD deployment pipeline leveraging GitHub Actions (CI), Octopus (CD), and Kubernetes, ensuring controlled and automated deployments without direct production pushes.
- Enhanced observability by implementing OpenTelemetry-based tracing for HTTP requests and SQL queries, with support for custom span creation and scoped resource management.

SEO Tech Developer, New York, NY

June 2023 – August 2023

Tech Developer Intern

- Completed 300+ hours of software engineering training focused on full-stack development, algorithms, software testing (including patching and debugging), and API integration.
- Developed, tested, and integrated APIs into web applications using Python (Flask), HTML, CSS, and MySQL, collaborating in SCRUM-like teams on projects such as a chatbot and a weather app.

SKILLS

Programming & Development: Python, R, C#, .NET, SQL, MySQL, Java, JavaScript, Ruby on Rails, HTML/CSS/Bootstrap.

Data & ML: Pandas, NumPy, Scikit-learn, TensorFlow, Feature Engineering, Tableau, Power BI.

DevOps & Cloud: AWS, GitHub Actions, CI/CD, Kubernetes, Multi-threading, OpenTelemetry.

Automation & Tools: RESTful APIs, Microsoft 365, Power Platform (exposure), Git, Agile/SCRUM.

Languages: English, Spanish
